

## **USER STORIES**

As a user, I would like to view the weather forecast for specific weather stations across the country to easily know what the weather will be in these specific areas.

As a user who prefers organised information, I would like the forecast information to be layed out nicely, in graphs or tables so that I can read the information easier.

As a user who prefers visual representation of information, I would like an option for the forecast information to be displayed in a graph to provide a more visual representation for me.

As a user who would like to see more specific values within a graph, I would like to be able to zoom in or out of a graph to obtain a more detailed view.

As a user who will be using this website to view both past data and forecasts, I would like there to be a clear distinction between historical data and forecasts, so that I don't get confused between either.
